

NEW SHIVAJI PARK

Shivaji Park is currently surrounded by streets on four sides which encloses the Park within. By proposing an underpass on the western edge, the Beach becomes the fourth edge of the Park.

CREATING AN UNDERPASS

CONNECTING THE PARK AND THE BEACH

New Shivaji Park includes the existing Park and the long uninterrupted Beach stretch, creating a much larger public space and creating a transitional experience for the citizens from the greens of the park to the vast openness of the sea.

The Underpass at New Shivaji Park will be **518 meters long** with 6 lanes, costing **Rs. 194 Crores**.

Based on cost from Joint Technical Committee, Govt. of Maharashtra, 2011, Coastal Road

PLAN

The side between Shivaji Park and Dadar beach is lined with multiple civic buildings with compound walls dividing the public spaces. By making these spaces accessible and opening the sites up to the public, the citizens will have an uninterrupted access to the beach.

1.76 Acres of public space without land acquisition!
